Generate OCI Architecture Diagrams from Terraform with One Claude Code Command

#claudecode #oci #terraform #devops

The problem

Manually drawing OCI diagrams in draw.io is tedious...

What I built

<https://github.com/sergio-farfan/OCI-draw.io-Architect>

A Claude Code plugin — type `/drawio-architect` in any project...

How it works

The plugin accepts three input types: a Terraform directory path — parsed to extract VCNs, subnets, gateways, and DRG attachments — a VCN name resolved against existing `.tfvars` files, or a plain-text description of the target architecture.

From any of these inputs, it computes a pixel-precise grid layout, calculating container bounding boxes to eliminate element overlap, and generates a Python script leveraging a custom `DrawioBuilder` class backed by 220 bundled OCI SVG icons. Executing the script produces a `.drawio` file fully styled with Oracle's official color palette.

The entire workflow is invoked within Claude Code via a single `/drawio-architect` command.

Quick start

```
curl -fsSL https://github.com/sergio-farfan/OCI-draw.io-Architect/releases/download
```

Step by Step Installation

Prerequisites

- **Claude Code** (CLI) installed and working
- **Python 3.8+**
- **draw.io desktop** for viewing generated `.drawio` files

The plugin bundles 220 OCI SVG icons and auto-installs Pillow (Python imaging library) if missing.

Installation

Step 1 - Extract the archive

```
tar -xzf oci-drawio-architect-v1.0.0.tar.gz
```

Step 2 - Run the installer

```
./oci-drawio-architect/install.sh
```

This will:

- Check prerequisites (Python 3, Pillow)
- Install Pillow automatically if missing
- Create a local marketplace at `~/.claude/plugins/marketplaces/local/`
- Copy the plugin files into the marketplace
- Verify all components (5 checks)

Step 3 - Register in Claude Code

Open Claude Code and run these two commands:

```
/plugin marketplace add ~/.claude/plugins/marketplaces/local  
/plugin install oci-drawio-architect@local
```

Step 4 - Restart Claude Code

Exit Claude Code and reopen it for the plugin to load.

Step 5 - Verify

Run inside Claude Code:

```
/drawio-architect
```

The command should prompt you for what to diagram.
